

Artificial Intelligence Approaches for Antibiotic Discovery

Prof. César de la Fuente, Ph.D.
Presidential Assistant Professor

Machine Biology Group
Institute for Biomedical Informatics,
Institute for Computational Science
Institute for Translational Medicine and Therapeutics,
Depts. of Psychiatry and Microbiology,
Perelman School of Medicine
Depts. of Bioengineering and
Chemical and Biomolecular Engineering
University of Pennsylvania

Time: >10 years from lab to the clinic

Cost: \$2.6 billion per drug in 2014

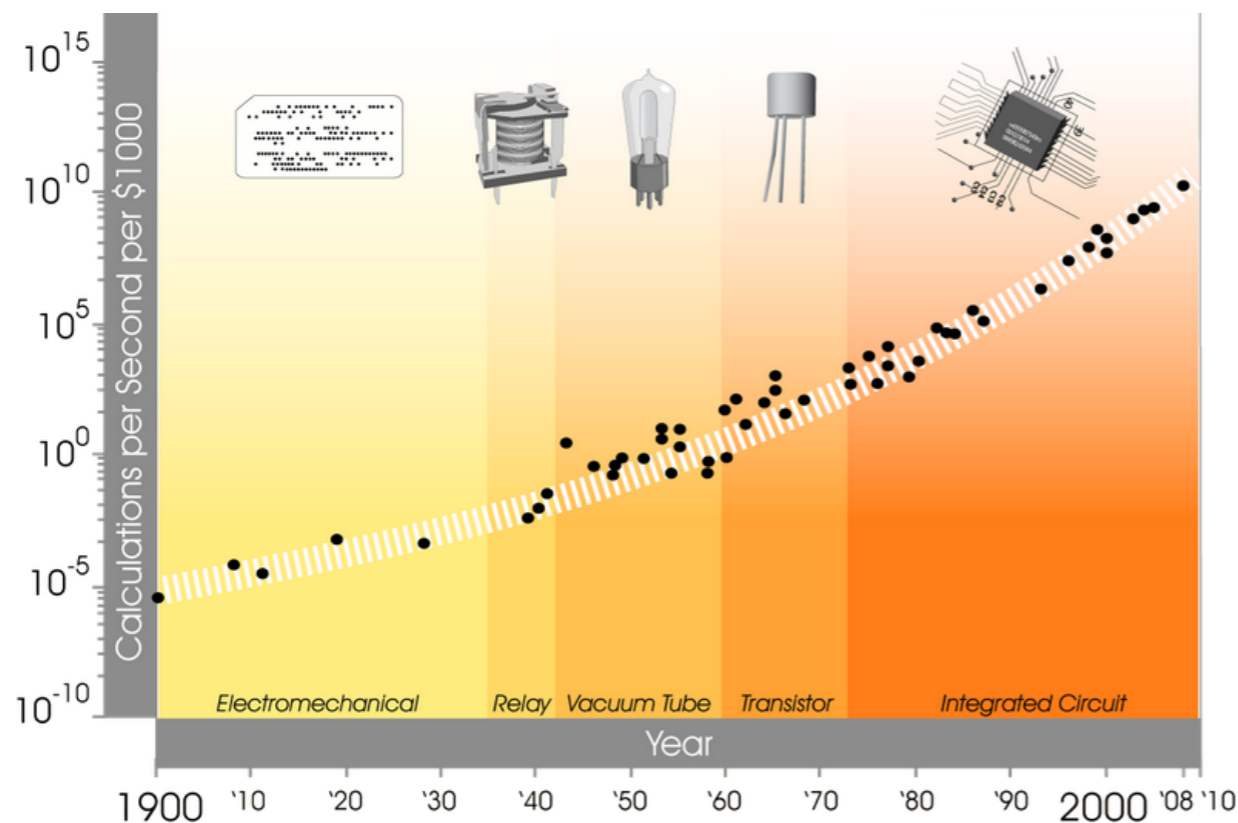

Drug Discovery and Development: A LONG, RISKY ROAD

Cost of Drug Development

Compute power

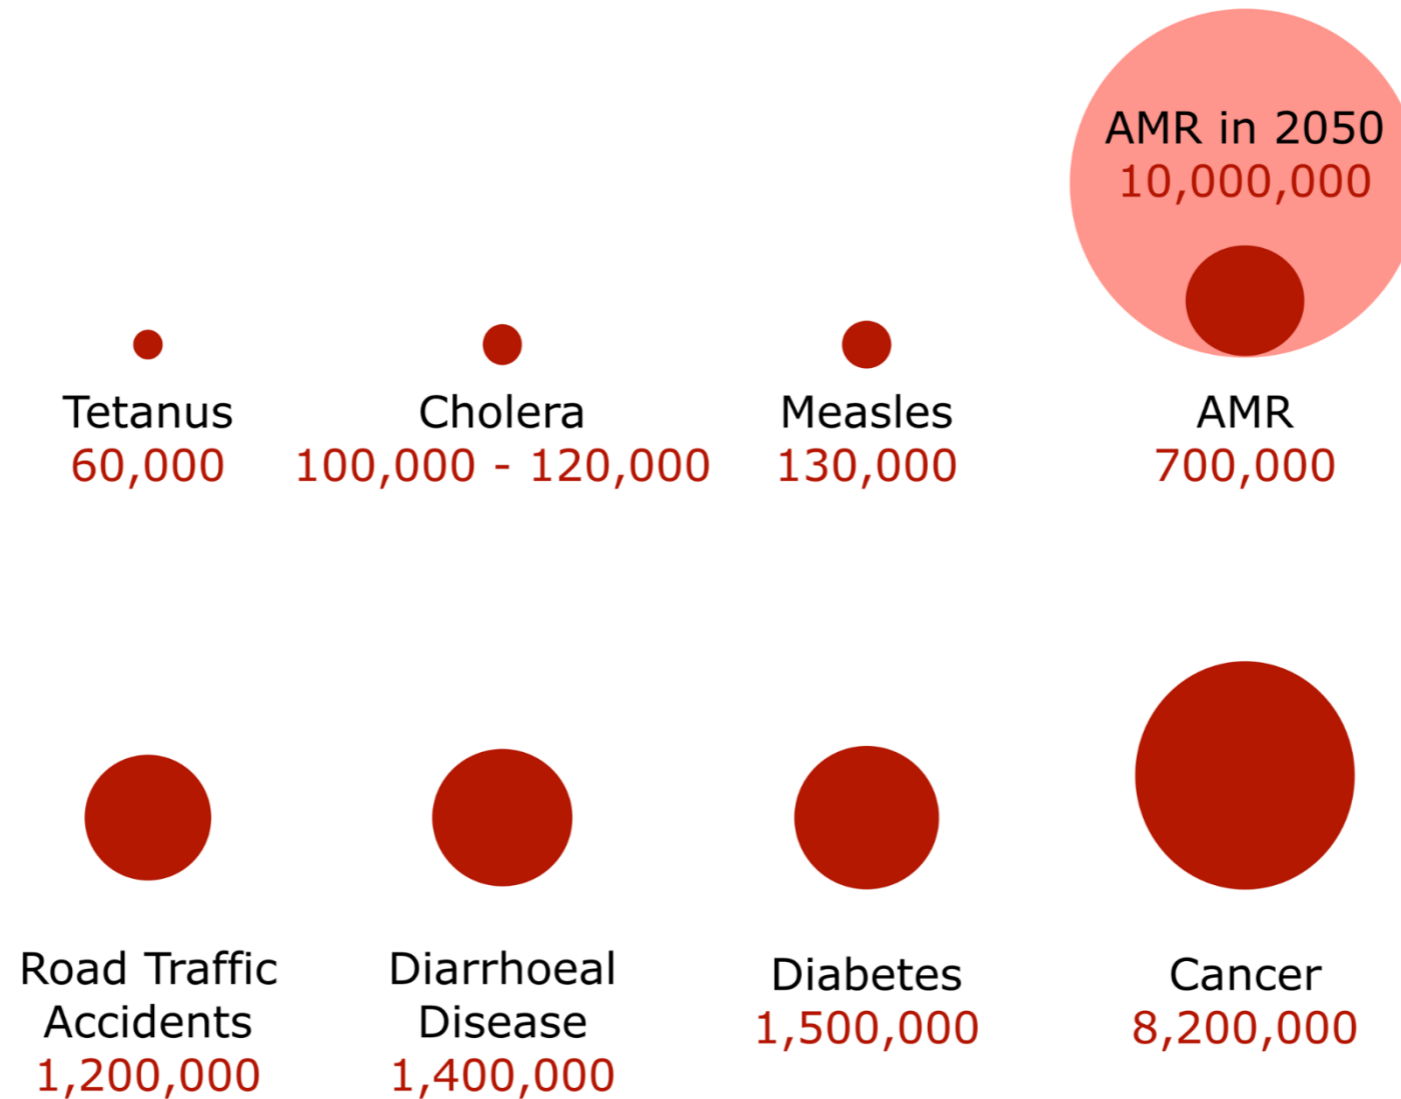

Data availability

Antibiotic Resistance: A Global Health Problem

Deaths attributable to antimicrobial resistance every year compared to other major causes of death

1 human death every 3 seconds

The Biological World is Running Out of Antibiotic Chemistries

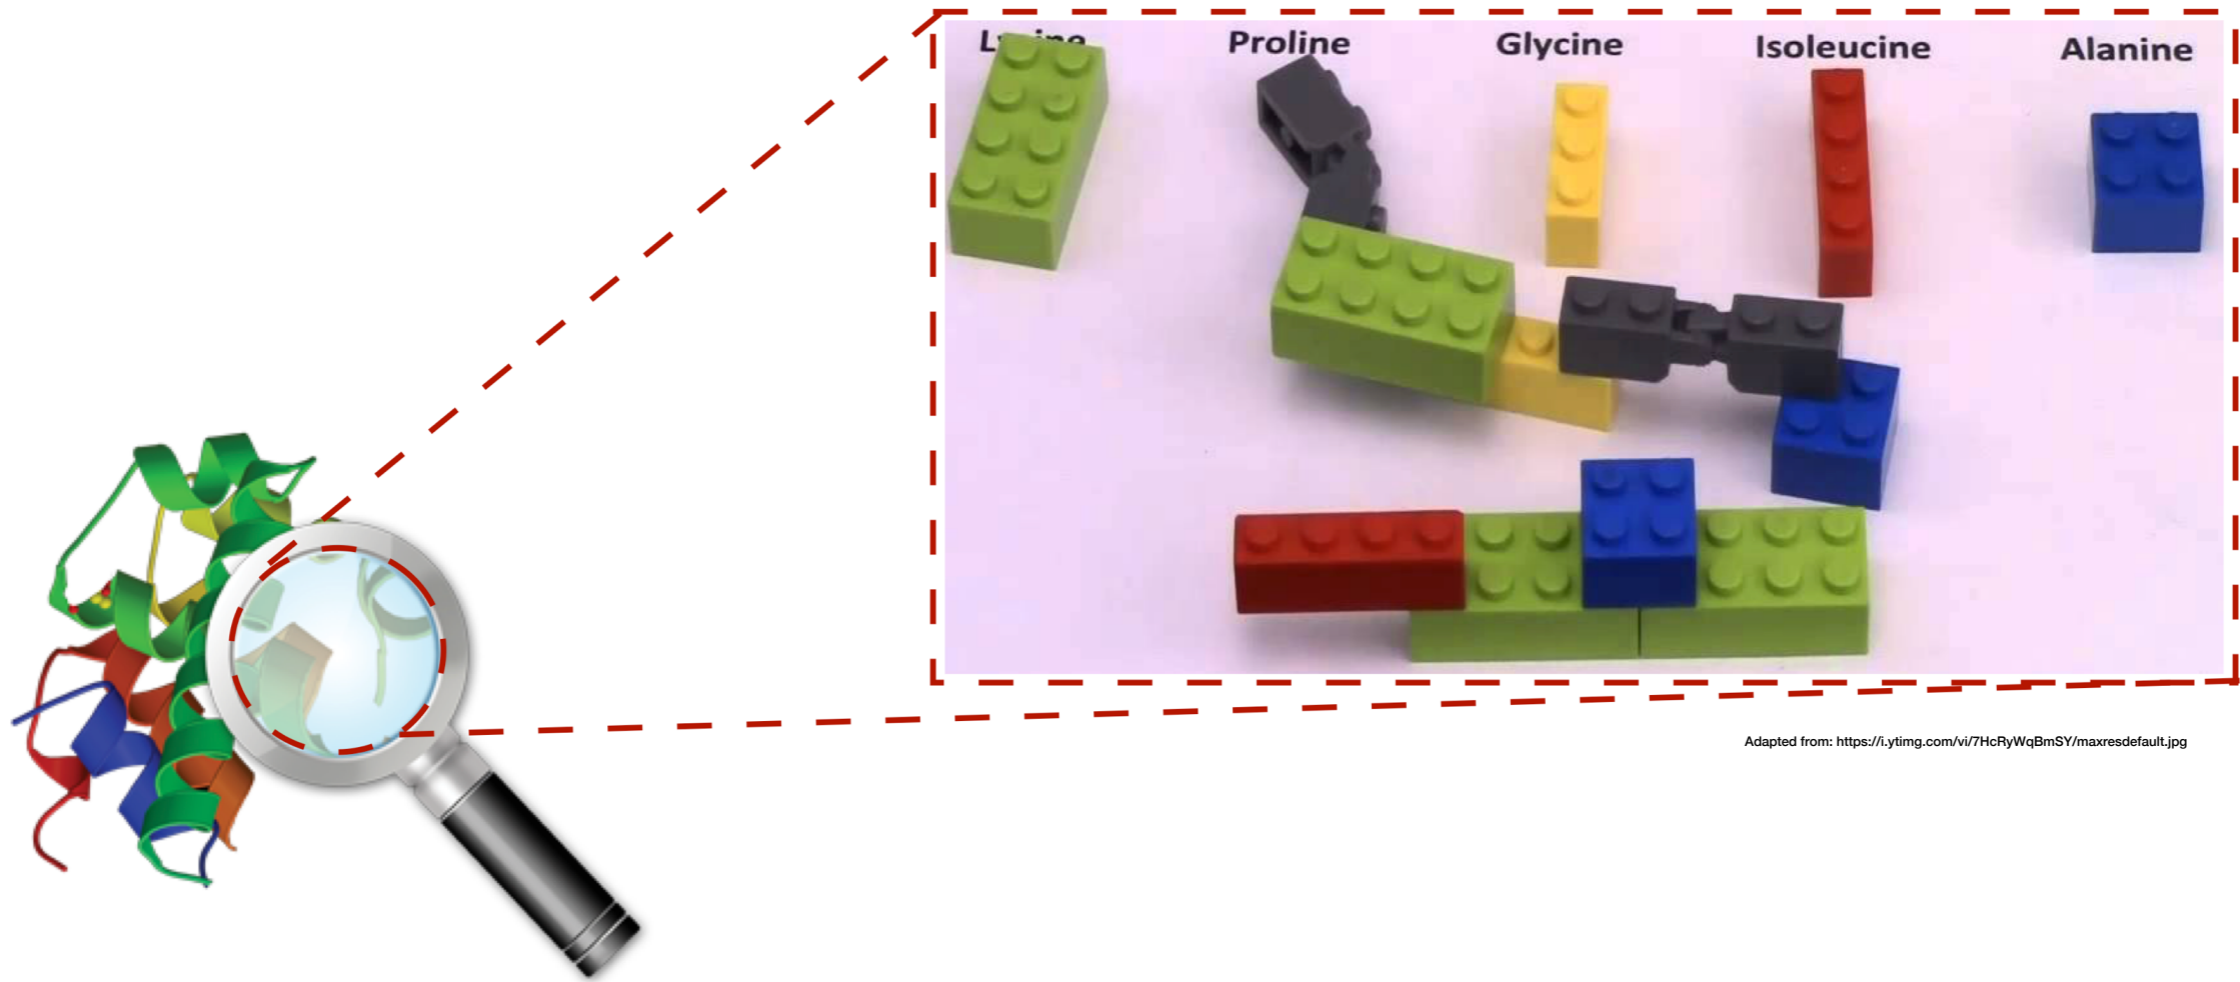

Photograph: NASA

Can Computers Achieve Autonomous Molecular Discovery?

Structure determines protein (peptide) function (Anfinsen's dogma)

Controlled sequence → controlled function/activity

Explore Sequence Space

Generate New Molecules

Mine Biology

Protein Space is Astronomical: Opportunity for Engineering

Number of plant and animal species on Earth: 10^7

Number of people on Earth: 10^{10}

Number of microbial species on Earth: 10^{12}

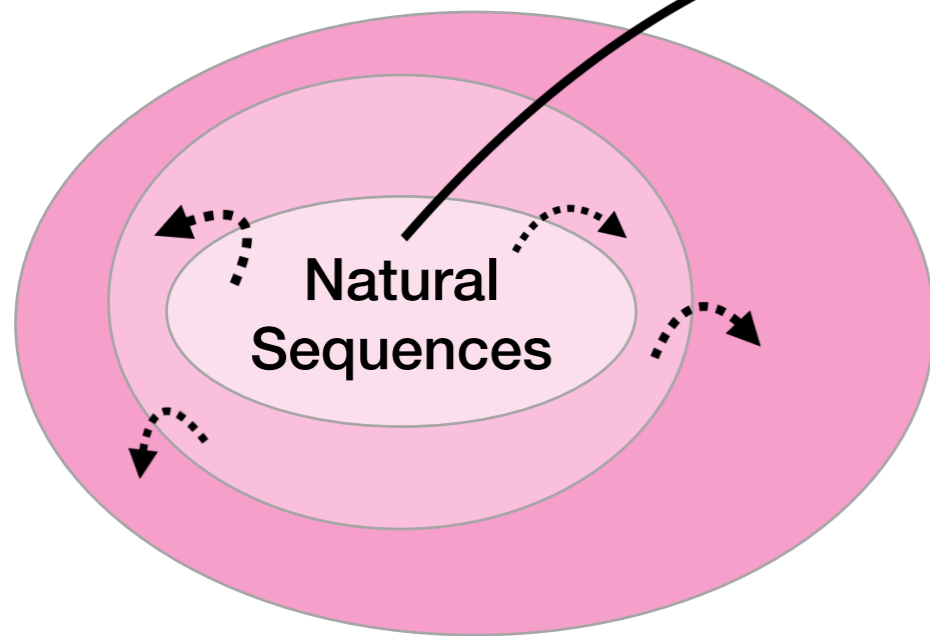

Number of bacteria in a human: 3.8×10^{13}

Number of sand corns on Earth: 10^{28}

Number of stars in the Universe: 10^{31}

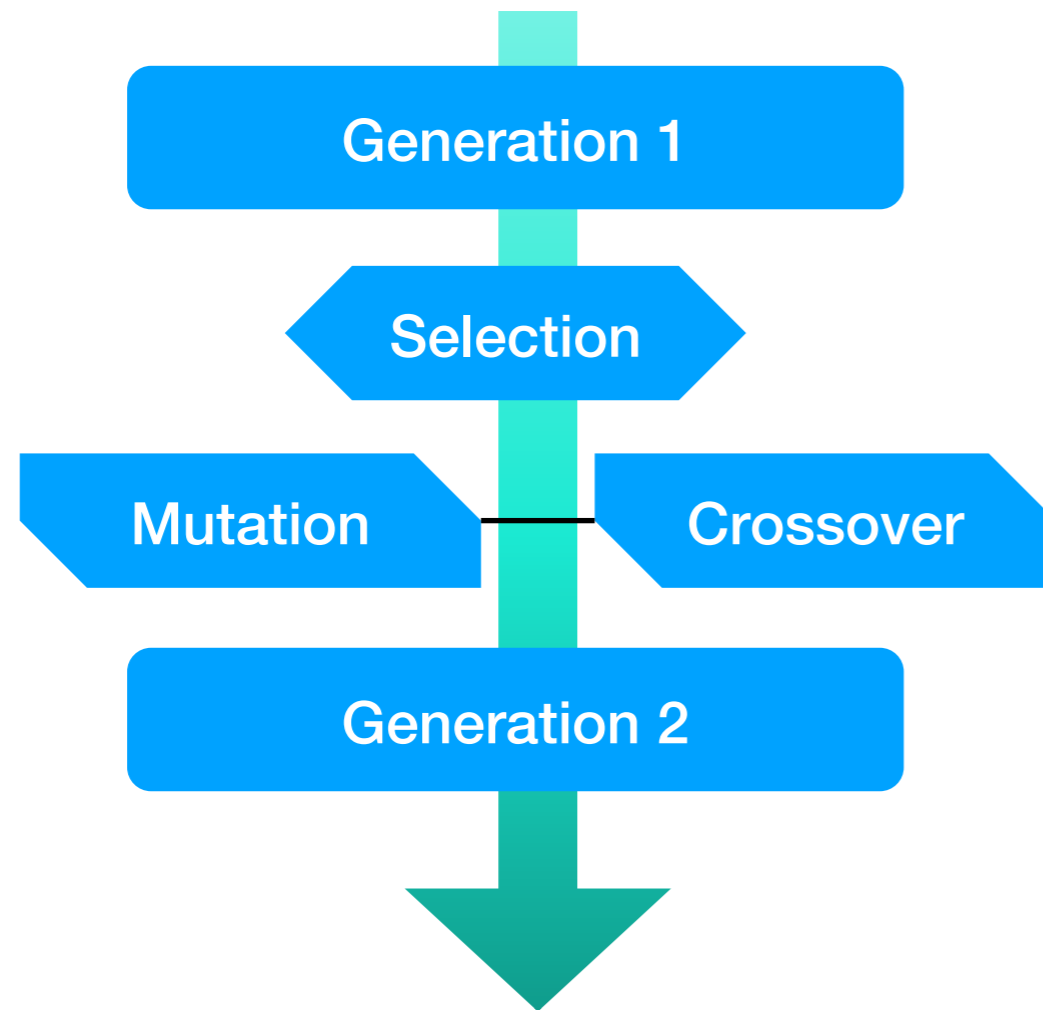

25 amino-acid peptide: 10^{32} !

Sequence Space

Directed Evolution-generated Sequences

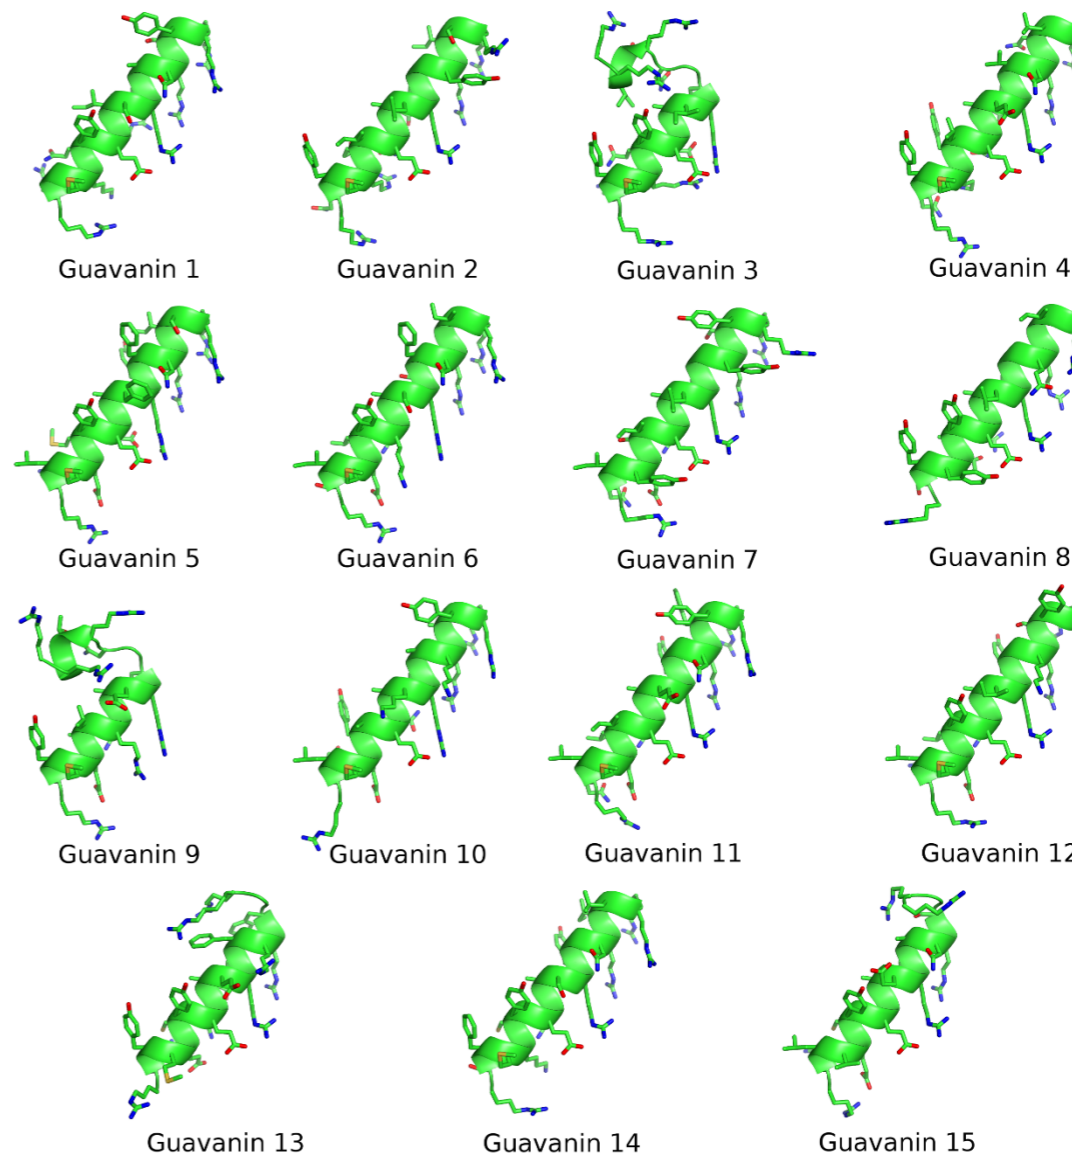

Computational Directed Evolution Using Genetic Algorithms

RESPSSRMECYEQAERYGYGGYGGGRYGGGYGSGRGQPVGQGVERSHDDNRNQPR

Nature Communications, 2018, 9:1490.

Lead peptide MIC = 6 $\mu\text{g mL}^{-1}$
vs.
Pg-AMP1 (WT peptide) MIC > 100 $\mu\text{g mL}^{-1}$

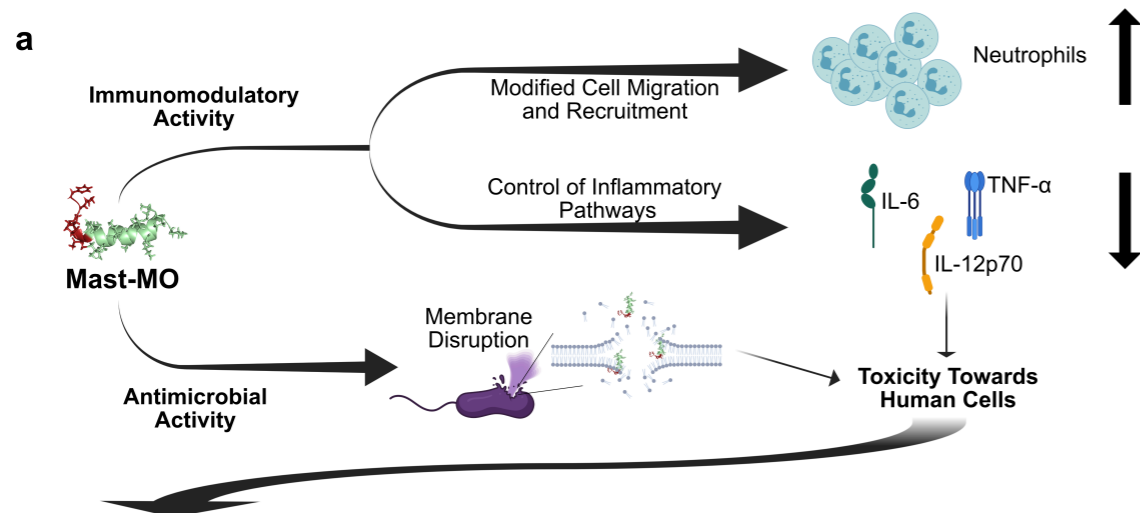

Nature Communications, 2018, 9:1490.

Machine-Made Antibiotics Kill Bacteria in Animals

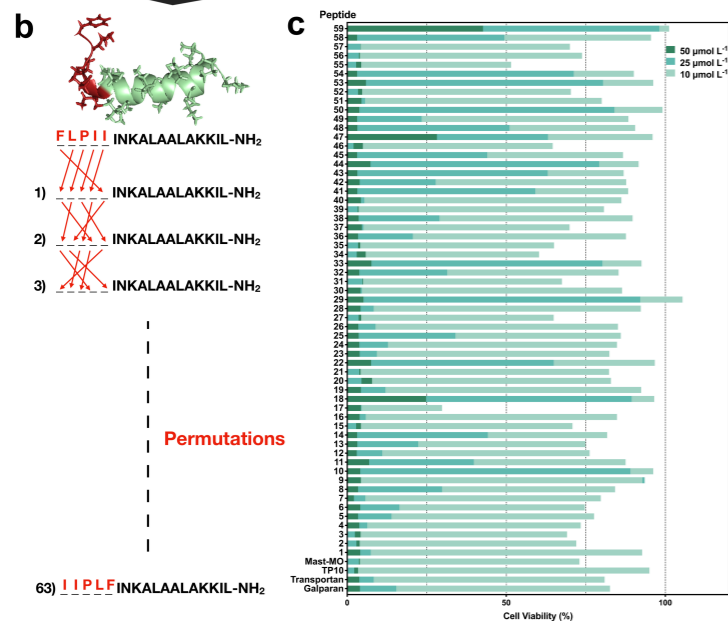

In vivo Activity of "Artificially Evolved" Peptide

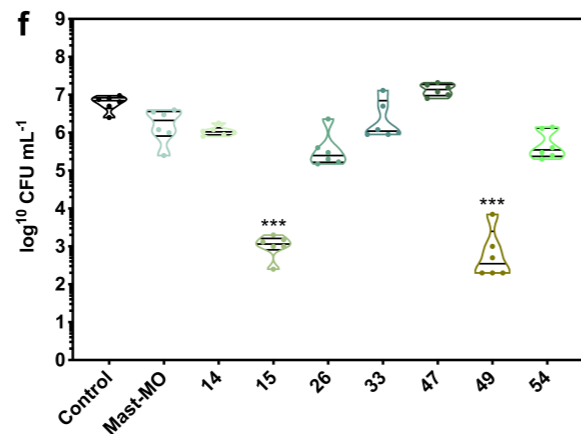

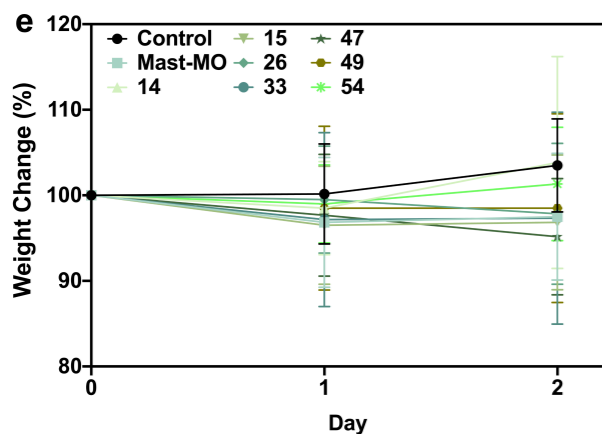

Dual antimicrobial + immunomodulatory activities

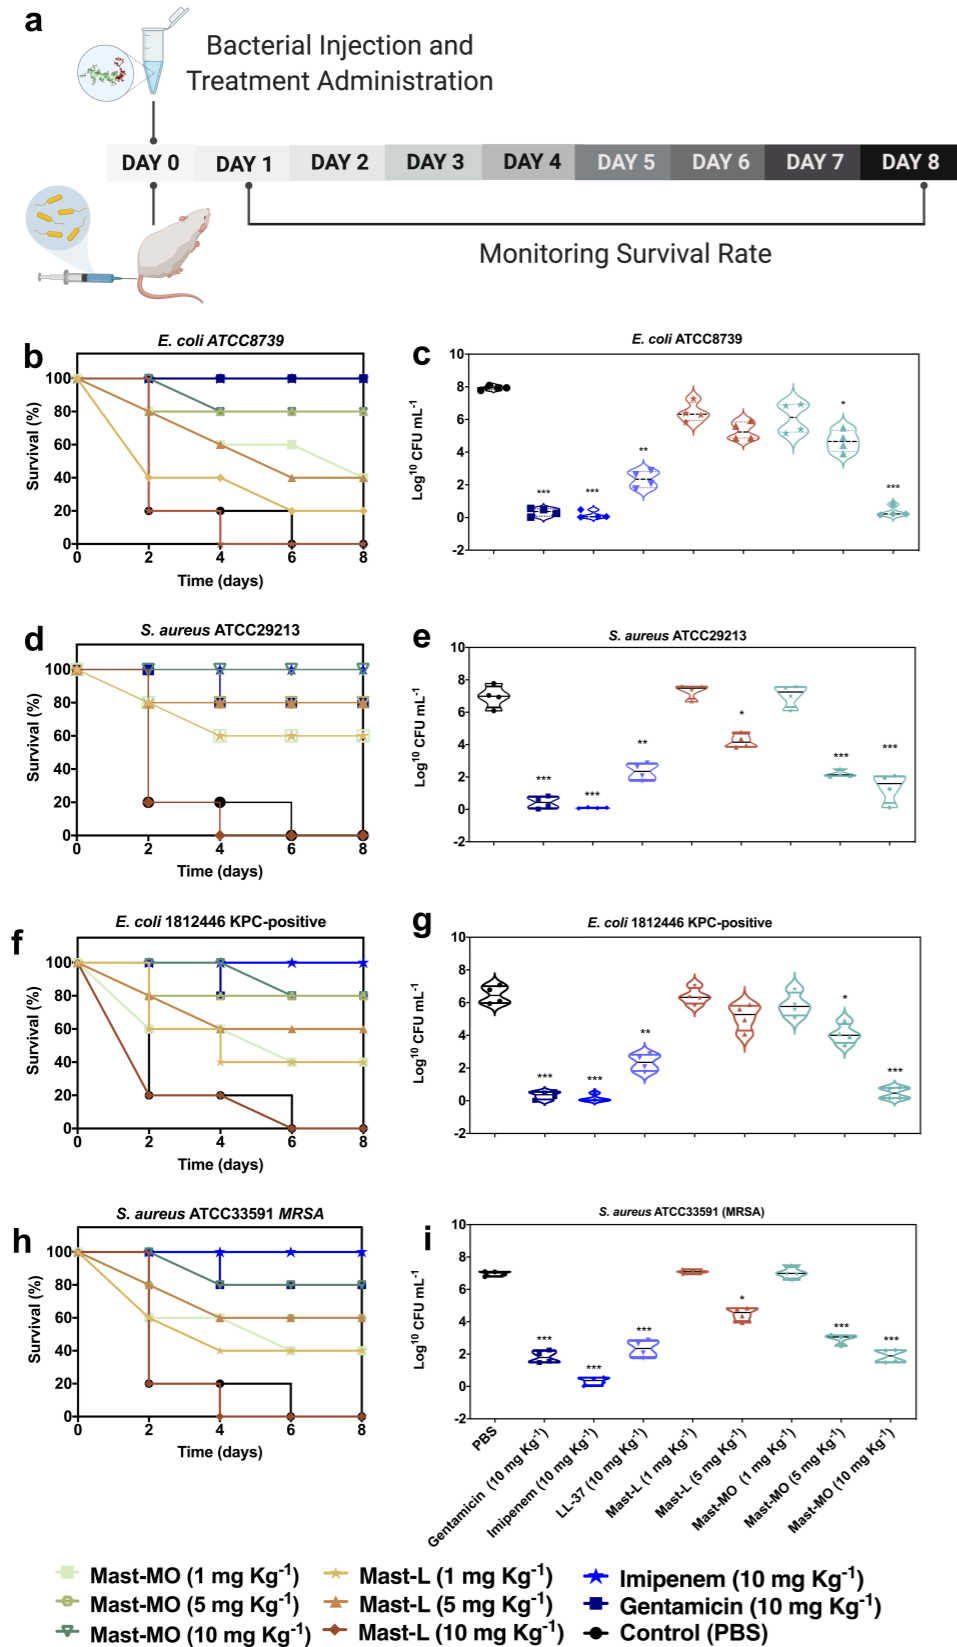

Anti-inflammatory properties

Rational design depletes cytotoxicity vs human cells

Efficacy in mouse model

Effective vs sepsis which kills 11 million people per year (as of 2017)

Efficacy comparable to standard-of-care antibiotics

Broad-spectrum activity

Active vs drug-resistant strains

Biology has encrypted useful information.
How do we decrypt it to discover novel antibiotics?

http://news.softpedia.com/news/new-decryption-key-available-for-cry128-strain-of-crypton-ransomware-family-515363.shtml#sgal_0

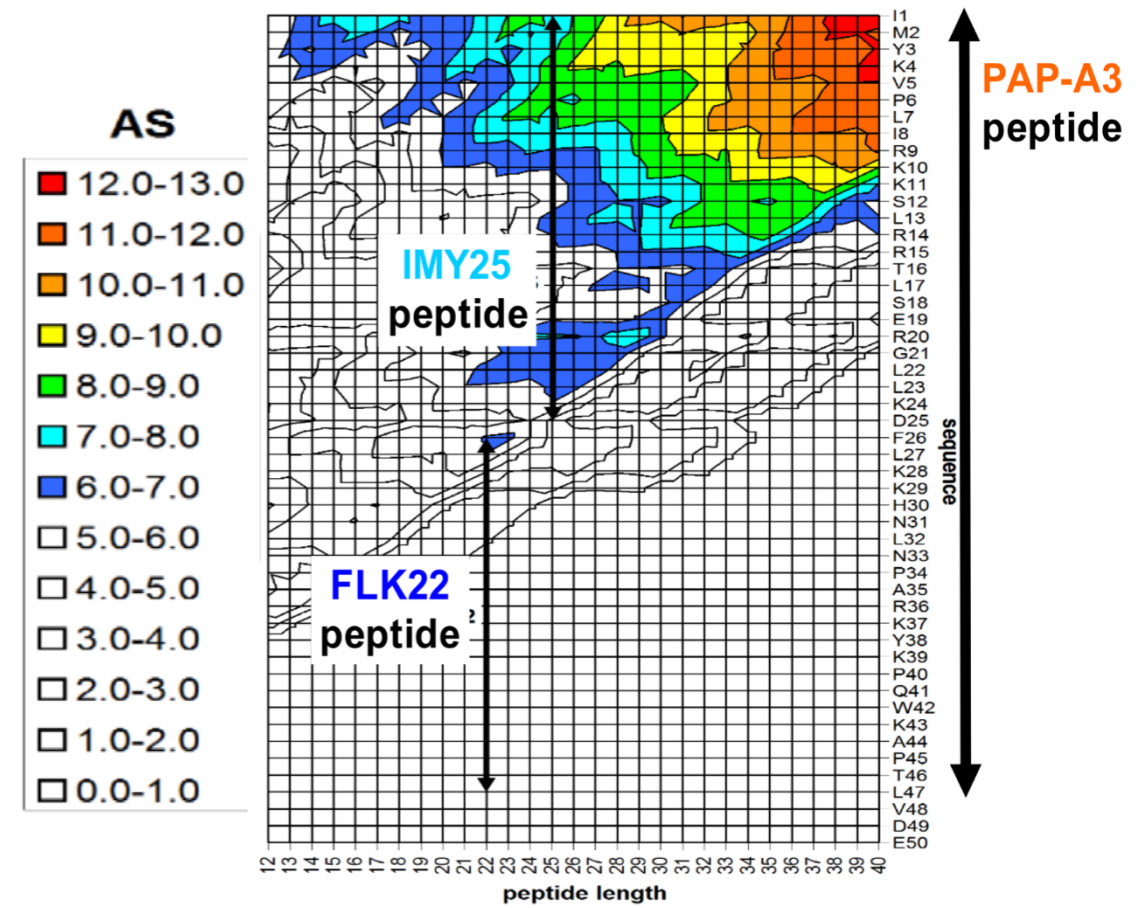

Pattern Recognition for Antibiotic Discovery?

Patterns identified based on desired target function

$$f(x) = C^m H^n L$$

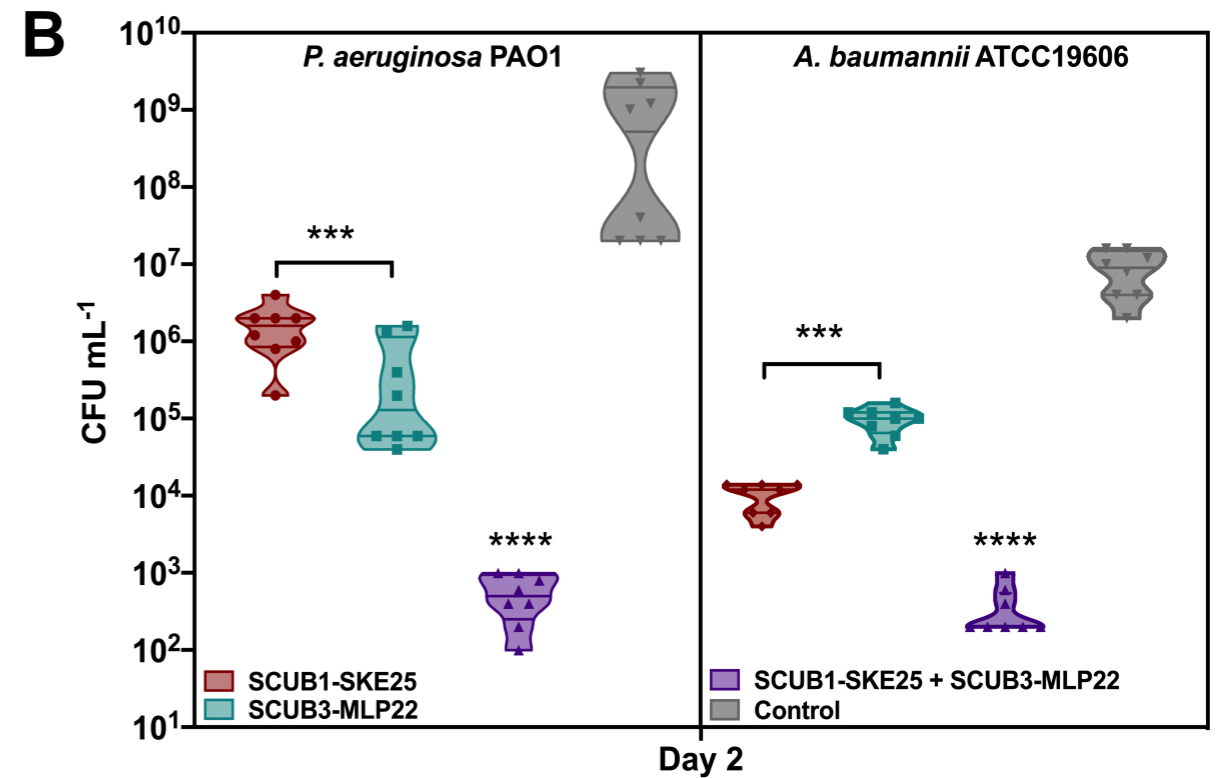

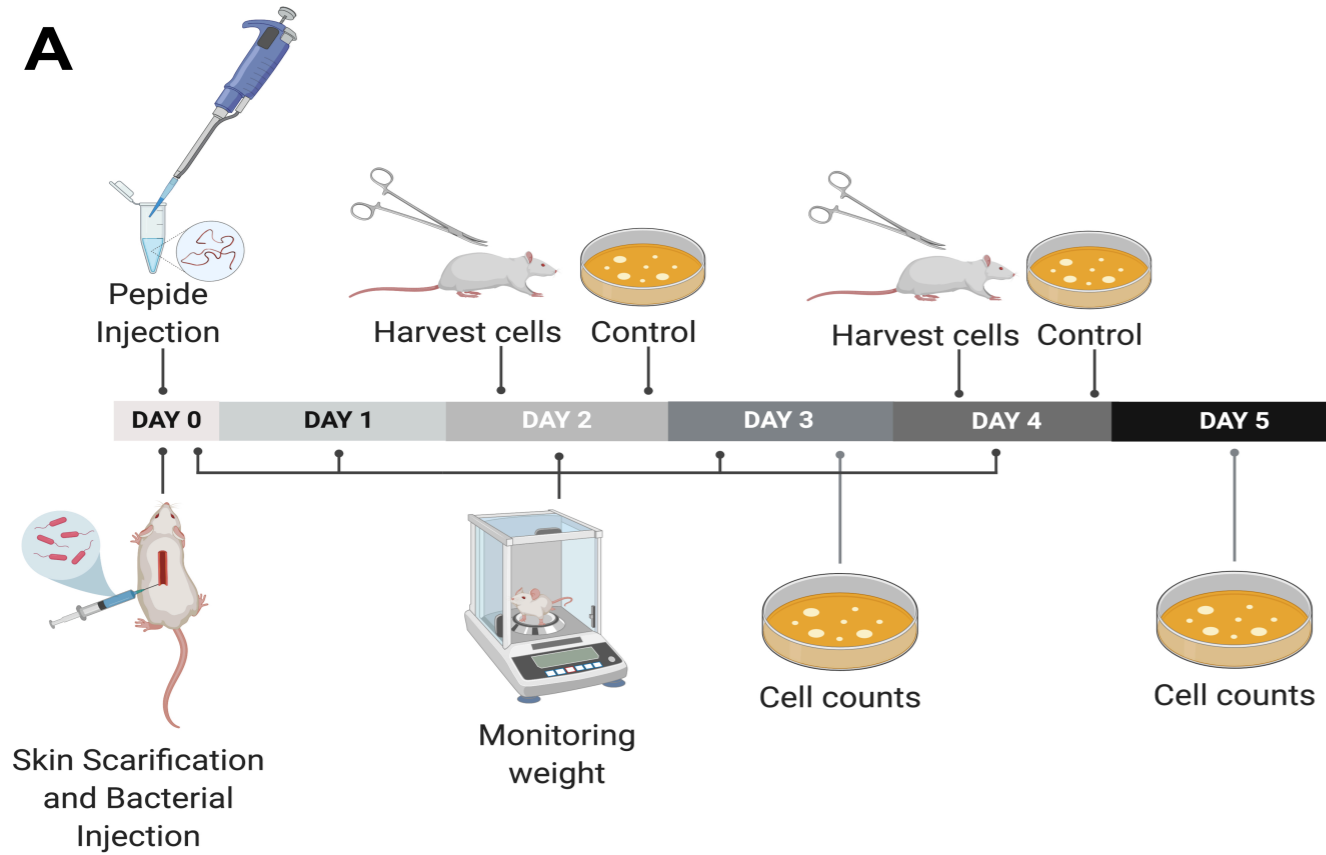

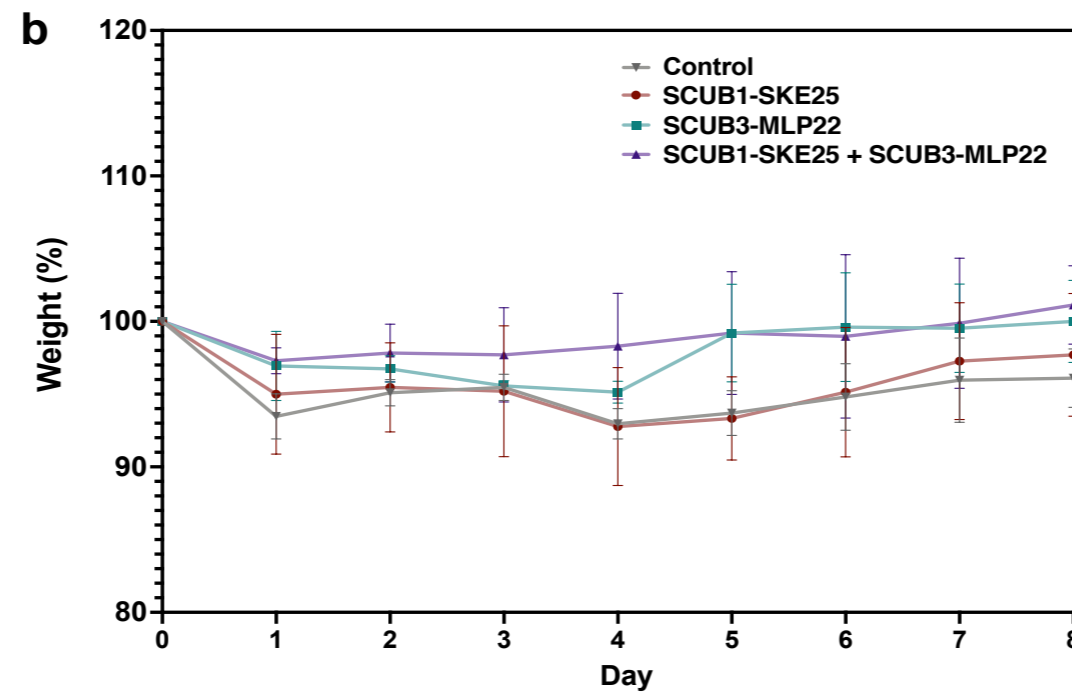

Antibiotics hidden in the human proteome

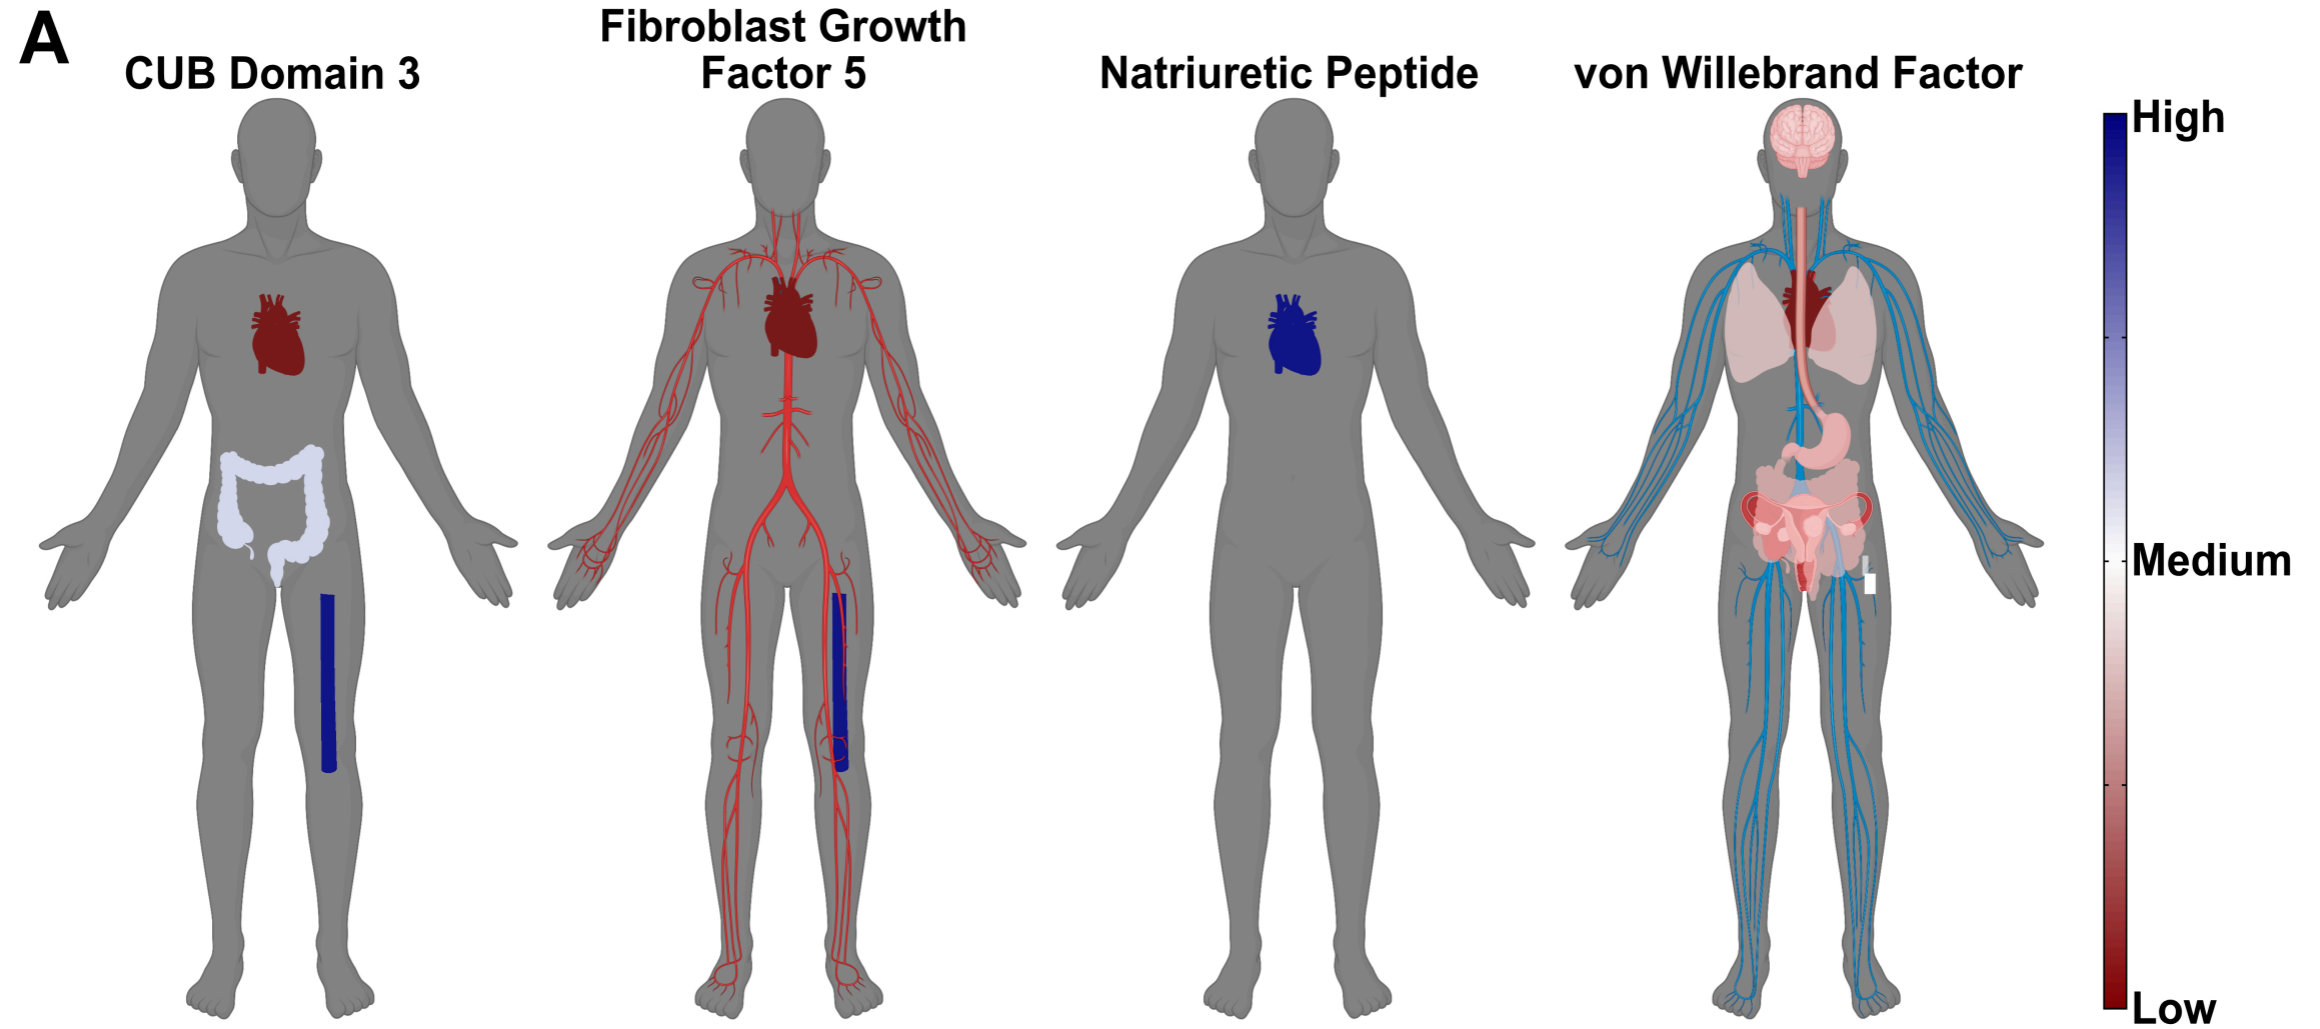

Search algorithm based on sequence length, net charge and average hydrophobic residues was integrated into fitness function that selects for antimicrobial sequences.

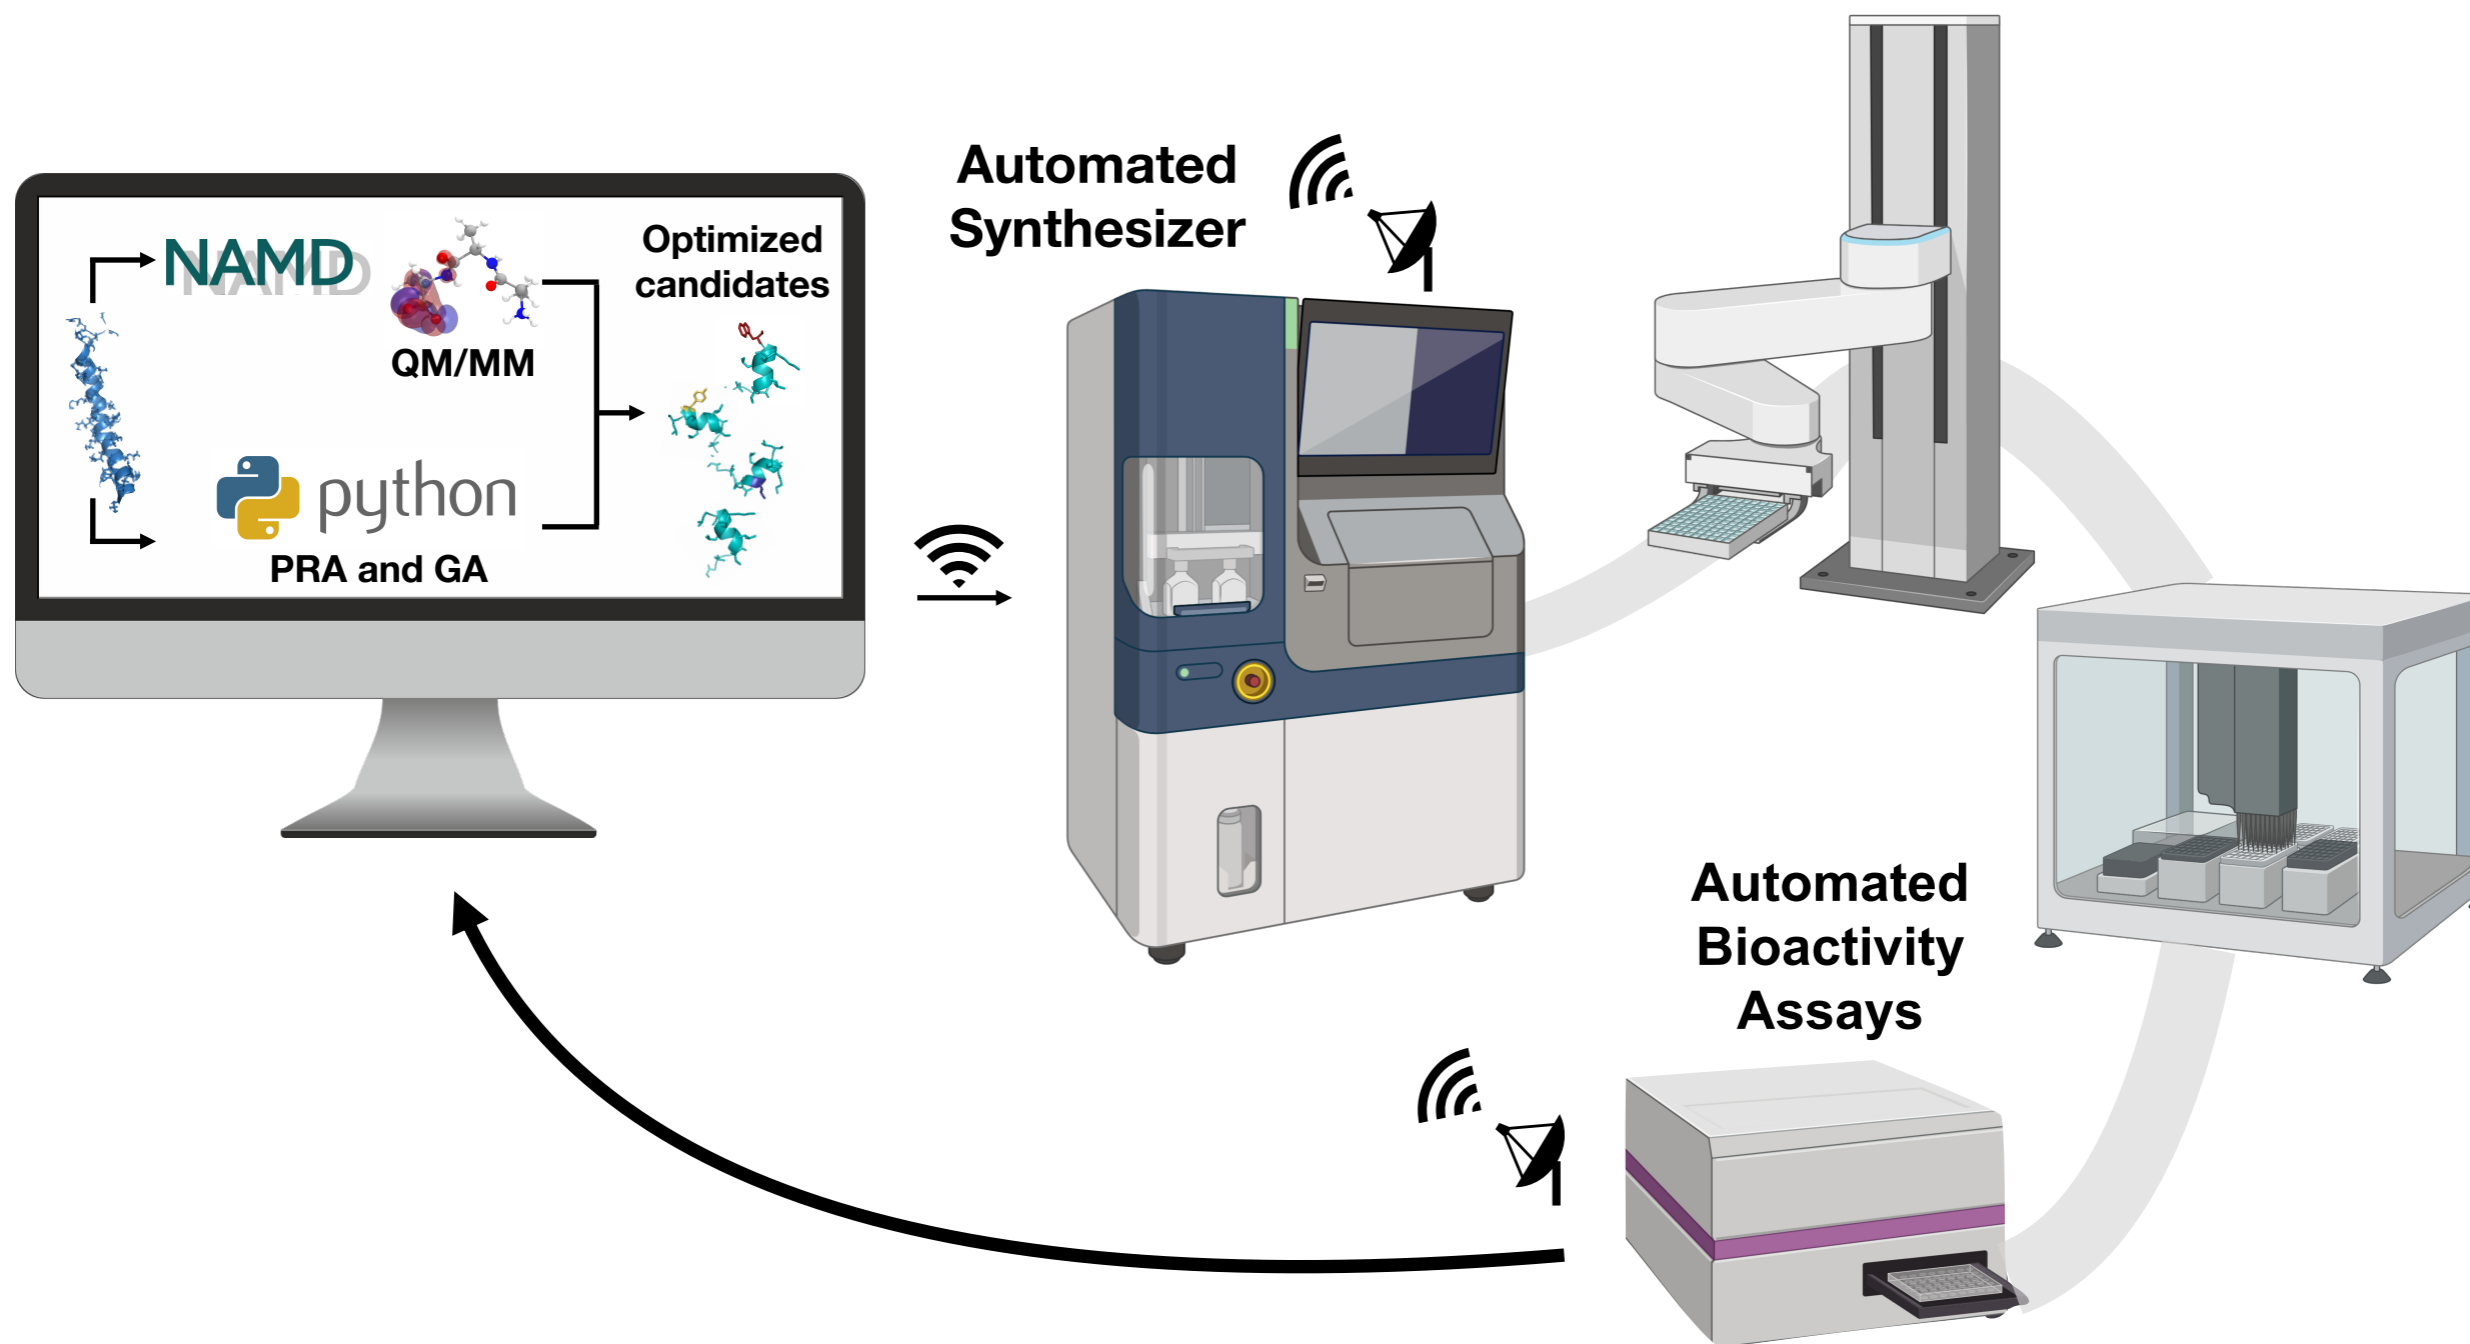

Self-Learning Autonomous Platform for Molecular Discovery

Launch Yourself into the Literature

Help your students get up to speed on emerging topics and techniques
